AARON SWEEMER

Cloud Services & Partner Technical Leadership Executive

Cincinnati, OH · 513-560-7817 · aaron.sweemer@gmail.com · linkedin.com/in/aaron-sweemer

PROFILE

Technology services executive with 20+ years leading and transforming customer facing technical organizations at VMware, Check Point, and a $500M national MSP. Currently own the Infrastructure & Cloud Managed Services P&L at Encore Technologies, built from near zero into a portfolio of as-a-service and managed offerings with its own services IP, pricing models, and 24x7 delivery engine. That is the practice building motion vendors ask of their best partners, executed from the partner side, with first hand command of what makes a partner practice profitable enough to sustain investment. Repeated record of redesigning the operating model, metrics, and mandate of technical functions (pre-sales, solution architecture, customer experience, managed delivery) rather than just running them. Patented in virtualization.

EXPERIENCE

ENCORE TECHNOLOGIES · Cincinnati, OH — 2024 – Present

Vice President, Cloud Services — Infrastructure & Cloud Managed Services (ICMS)

Own the infrastructure and cloud managed services P&L at a ~$500M national MSP with five owned data centers. Built the managed services practice from the ground up. The services IP, the offer portfolio, the pricing models, the operating model, and the delivery organization behind them.

- Grew ICMS into a **multi-million-dollar recurring-revenue P&L** across healthcare, financial services, public sector, education, and logistics.
- Launched four as-a-service offerings built from scratch (IaaS, Backup-as-a-Service, managed monitoring & observability, managed network), each with defined commercials, SLAs, pricing and operating models.
- Closed the **largest managed services engagement in company history**, a 7-year, $10M TCV contract with a Fortune 500 financial services firm, owning solution scope, staffing model, tooling architecture, and commercial structure end to end.
- Designed the delivery operating model. A 24x7x365 Tier 1 NOC, a new Tier 2 Support Engineering function stood up with charter, RACI, and escalation contracts, Tier 3 delivery, and Tier 4 proactive architecture.
- Redefined the function's mandate and metrics around a **reactive → proactive → automated → advisory** work ladder, with declining reactive volume as the measured North Star, moving the organization from reactive response to an outcome led posture.
- Make the partner side investment calls every quarter (which vendor motions to build a practice around, which to walk away from), the exact economics a vendor's partner organization must influence.
- Hired and lead the ICMS organization through four leaders spanning platform engineering, infrastructure services, and support engineering.

CHECK POINT SOFTWARE TECHNOLOGIES — 2021 – 2024

Global Head of Cloud Customer Experience — 1/2023 – 2/2024

Merged four functions (technical sales, operations, partnerships, and customer success) into a single cloud customer experience organization with 8 managers, 150 employees, 2,500 customers, $200M ARR portfolio. New operating model, new roles, new metrics.

- Increased CSAT 50% through the reorganization and the role clarity, metrics, and enablement that came with it.
- Boosted technical win rate 200% by overhauling technical validations: POCs, demos, solution design, and architecture whiteboards.
- Cut customer churn from 30% to 10% by redefining role objectives, metrics, and enablement.
- Conceived and launched a Cloud Security Center of Excellence in collaboration with R&D and product development.

Global Head of Cloud Security Architects — 3/2022 – 1/2023

Led a global team of 75 cloud security architects driving adoption across AWS, Azure, and GCP.

- Grew top-of-funnel cloud pipeline 50% through planned ecosystem integrations and recruitment of cloud centric VARs and MSPs.
- Achieved 95% customer satisfaction while reducing clients' security incidents 40% through adoption of modern cloud security architecture.
- Doubled team certifications and lifted delivery efficiency via a structured architect development program.

Head of Cloud Security Architects, Americas 11/2021 – 3/2022

- Promoted to global scope within four months of joining.

VMWARE **2008 – 2021**

Sr. Director, Cloud Solution Architecture 2/2021 – 11/2021

Led 5 managers generating cloud solutions revenue across verticals and customer segments for a $13.6B software company.

- Exceeded revenue target by 120%, driving cloud adoption across 1,000+ customers.
- Positioned VMware's data center portfolio inside the hyperscalers (VMC on AWS, AVS, GCVE).

Sr. Director, Cloud Incubation 9/2016 – 2/2021

Built and ran the incubation function taking new cloud offerings from ideation to market with a team of 20 architects, sellers, and customer success.

- Launched 5 flagship cloud products, including VMC on AWS, with time-to-market under one year.
- Increased technical win rates 60% through targeted capability development.
- Grew DR-as-a-Service revenue 50% by leading the integration of Datrium's technical teams and products post-acquisition.

Director, Field Strategy — Cloud Native Apps 1/2015 – 9/2016

- Launched VMware's first cloud native product portfolio for enterprise clients; exceeded revenue target 200% and captured 100s of customers in year one.

Earlier roles 2008 – 2015

- Sr. Systems Engineer → Staff Systems Engineer → Principal Systems Engineer: three promotions to VMware's most senior individual contributor technical level.

EDUCATION, AWARDS & RECOGNITION

- **MBA**, Computer/Information Technology Administration & Management, University of Phoenix
- **BS, Computer Science**, University of Maryland
- **President's Club**, VMware (2009, 2017, 2019; top 5% in sales)
- **Technical Manager of the Year**, VMware, 2018
- **U.S. Patent 9,652,273**: "Method and system for creating a hierarchy of virtual machine templates in a virtualized computing system"
- **Speaker / Session Leader / HOL @ VMworld**, every year, 2008–2021

EXPERTISE

Partner & channel: MSP and service provider economics · partner practice building · services IP and offer development · as-a-service and managed offering GTM · pricing and P&L ownership

Leadership: leading leaders · operating model and metrics redesign · cross functional influence (sales, channel, product, services) · technical talent development

Platforms: hybrid cloud (AWS, Azure, GCP, VMC on AWS, AVS, GCVE) · VMware/VCF · virtualization migration · Kubernetes (Tanzu) · Nutanix

Cyber resilience & security: cloud security architecture · CNAPP (CSPM, CIEM, CWPP, DSPM) · Backup/DR-as-a-Service

Data & AI: Python · Databricks · Spark · BigQuery · analytics driven customer insight

Operations tooling: Datadog · Zabbix · SigNoz · ServiceNow · Halo ITSM · Salesforce · Jira
